

MSU HACK-A-THRONE 2026 · PROBLEM P11

GramSaarthi AI (ग्रामसारथी)

National Micro-Enterprise Evaluation Engine & Concessional Credit Appraisal Framework

An AI-powered, hyper-local platform transforming rural entrepreneurship through deterministic statutory loan sizing, 5-10 km spatial catchment intelligence, real-time multi-business portfolio synthesis, and trilingual AI advisory (English, Hindi, Gujarati).

DEVELOPED BY

Chirag Vasava (Team Lead)

MSU Vadodara

PRODUCTION DEPLOYMENTS

AWS EC2 + Vercel Edge

gramsaarthi-ai.chiragvasava.me

CORE ARCHITECTURE

Deterministic Math + AI Desks

Next.js 16 · Docker · Terraform IaC

The Rural Micro-Entrepreneurship & Credit Linkage Crisis

CHALLENGE 01

Lack of Hyper-Local Market Intelligence

- 63M+ rural micro-enterprises in India operate on hearsay rather than data.
- Over 40% of newly launched village enterprises close within 18 months due to localized market over-saturation.
- First-time founders lack visibility into real catchment footfall, competitor density, and mandi wholesale price

CHALLENGE 02

Statutory Credit Linkage Failure

- Government concessional debt schemes (Micro Finance @ 6.5% & Term Loans @ 8.0%) remain severely underutilized.
- Over 78% of rural loan applications are rejected by rural banks (RRBs) due to un-structured project reports.
- Applicants cannot accurately compute statutory 10% equity

CHALLENGE 03

Language & Single-Business Barrier

- Traditional advisory platforms operate in English, ignoring regional languages (Hindi, Gujarati).
- Existing software is rigid: assumes a founder only ever evaluates one business, making multi-enterprise planning impossible.
- Generic AI chatbots hallucinate invalid numbers or give dangerous non-

THE OPPORTUNITY: Democratize institutional-grade feasibility appraisal for every village entrepreneur across Bharat.

reserves.

GramSaarthi AI: Dual-Engine Feasibility Architecture

MODULE 01

Spatial Catchment Intelligence

- Hyper-Local Concentric Geofencing: Dynamically calculates 5 km primary consumption core and 10 km secondary institutional zone around applicant's exact village.
- Trade-Adaptive Infrastructure Nodes: Automatically plots sector-specific POIs (grain mandis, milk chillers, solar substations, artisan clusters).
- Empirical Sector SWOT Matrix: Generates trade-specific operational strengths, weaknesses, threats, and raw-vs-value-added pricing benchmarks.

MODULE 02

Deterministic Statutory Structuring

- Zero-Hallucination Math: Strict statutory formulas: $\text{Project Cost} = \text{Margin} \div 10\%$, $\text{Concessional Loan} = \text{Project} \times 90\%$.
- Automated Scheme Routing: Micro Finance ($\leq ₹1.40\text{L}$ @ 6.5% p.a., 3-mo grace) vs Term Loan Scheme ($> ₹1.40\text{L}$ @ 8.0% p.a., 6-mo grace).
- Moratorium Debt Amortization: Models grace period cash flows before principal amortizes across 8+ quarters.
- Multi-Enterprise Portfolio: Allows managing and switching multiple business dossiers simultaneously.

Master Technical Architecture & Data Pipeline

TIER 1: CLIENT & EDGE

Dual-Cloud Edge Ingress

- Vercel Edge Serverless CDN
- AWS EC2 (Elastic IP 13.126.176.46)
- Caddy Reverse Proxy
- Automatic TLS (HTTP/2, HTTP/3)
- Mobile PWA Responsive Layout

TIER 2: PRESENTATION

Next.js 16 App Router

- 4-Step Intake Wizard (/wizard)
- Portfolio Dashboard (/dashboard)
- Catchment Radar Map (/map)
- Parameterized Dossier (/report?id=)
- Trilingual Switcher (EN, HI, GU)

TIER 3: STATE STORE

Multi-Report Event Bus

- lib/report-store.ts Registry
- Unique Dossier IDs (GS-2026-..)
- Cross-Component Event Bus
- Live computeDynamicScore Engine
- Persistent SQLite Database

TIER 4: FINANCIAL & AI

Deterministic & ML Tier

- Statutory 10% Equity Calculator
- Micro vs. Term Scheme Classifier
- Grace Period Moratorium Amortization
- Domain-Restricted AI Advisor
- Canvas2D Color Proxy for PDF

KEY ARCHITECTURAL DECISION: Financial formulas are 100% deterministic (zero generative hallucination), while qualitative advice is handled by guardrailed AI.

Guided 4-Step Feasibility Wizard & Live Sizing

STEP 01

Geographic Location

Captures State, District, Block/Tehsil, and Village cluster to pinpoint base spatial coordinates and demographic

STEP 02

8 Enterprise Trades

Classifies enterprise: Dairy, Food Processing, Retail, Handloom, Agri-inputs, Fabrication, Services, or Solar

STEP 03

Margin Capital Sizing

Interactive currency input with quick presets (₹14k, ₹50k, ₹100k, ₹250k, ₹500k) with real-time statutory

STEP 04

Capability & Channel

Profiles founder experience (First-Time, Family, Experienced) and target distribution (Direct Retail

REAL-TIME LIVE SCORING ENGINE (computeDynamicScore)

Zero Hardcoded Data: Scores and appraisal metrics are calculated dynamically on submission:

- Feasibility Score (0-100): Weighted algorithm evaluating equity buffer (10%-25%), founder capability profile, sector demand resilience, and institutional linkage channels.
- Dynamic Scheme Sizing: Automatically binds Term Loan Scheme (8.0% p.a., 7 yrs) for projects > ₹1.40L, or Micro Finance Scheme (6.5% p.a., 3 yrs) for projects ≤ ₹1.40L.
- Instant Persistent Storage: Emits unique Dossier ID (e.g. GS-2026-P11) into user's persistent portfolio and redirects seamlessly to the customized report.

Multi-Report Architecture & Portfolio Management

THE MULTI-ENTERPRISE CHALLENGE

Rural Founders Manage Diverse Portfolios

- Reality of Bharat: A rural entrepreneur rarely runs just one enterprise; they balance dairy with flour milling, or retail provisions with solar servicing.
- Flaw in Traditional Tools: Conventional apps hardcode a single business view or overwrite previous reports upon running a new appraisal.
- Our Solution: An enterprise-grade Multi-Report Store (lib/report-store.ts) supporting unlimited independent appraisals per user account.

WHAT WE ENGINEERED

Seamless Cross-App Context Switching

- Deep-Linkable Dossiers: Every appraisal has an individual URL (/report?id=GS-2026-M04) rendering exact business metrics.
- In-Page Dossier Switcher: Top-bar dropdown allows toggling between saved reports without leaving the report screen.
- Dashboard Portfolio Aggregator: Automatically calculates combined capital investment (e.g. ₹11.20 Lakhs) and cumulative credit eligibility (₹10.08 Lakhs).
- Reactive Event Bus: gs_report_changed window event synchronizes Map, Calculator, and AI Chat in real time

VERIFIED: Switching between Dairy and Flour Milling updates SWOT, pricing, catchment, and chat context instantly.

Hyper-Local Market Radar & Catchment Geofencing

CONCENTRIC CATCHMENT ZONES

5 km & 10 km Spatial Sizing

- Dynamic Base Coordinates: Centers map on applicant's exact village and block (e.g. Tarsali, Savli Block, Vadodara or Dediapada, Narmada).
- 5 km Primary Consumption Zone: Visualizes immediate doorstep retail footfall, village haats, and direct consumer demand density (est. 8,000–12,000 population).
- 10 km Secondary Institutional Zone: Captures adjoining commercial clusters, bulk offtake buyers, and regional processing centers (est. 25,000–40,000 population).

TRADE-ADAPTIVE INFRASTRUCTURE POIs

Dynamic Ecosystem Mapping

- Dairy Enterprise: Plots milk chilling units, cooperative collection centers, veterinary clinics, and green fodder markets.
- Food Processing & Flour: Plots APMC grain wholesale mandis, spice packaging hubs, and commercial bakeries.
- Solar Solutions: Plots grid substations, agri-feeder lines, and distribution warehouses.
- Catchment Switcher: In-map dropdown allows instant toggling of catchment radar across different saved user businesses.

EMPIRICAL SWOT: Evaluates localized threats (fodder inflation, monsoon pest risk, grid reliability) per sector.

Concessional Debt Calculator & Moratorium Engine

STATUTORY EQUITY RULE

10% Margin Commitment

Project Cost = Margin $\div$ 0.10

Loan Amount = Project Cost $\times$ 0.90

Enforces central statutory guidelines.

MICRO FINANCE SCHEME

Projects $\leq$ ₹1.40 Lakh

Concessional Rate: 6.5% p.a.

Tenure: 3 Years (12 Quarters)

Moratorium: 3-Month Interest Grace.

TERM LOAN SCHEME

Projects $>$ ₹1.40L – ₹50L

Concessional Rate: 8.0% p.a.

Tenure: 7 Years (28 Quarters)

Moratorium: 6-Month Interest Grace.

DYNAMIC AMORTIZATION & WORKING CAPITAL BUFFER MODELING

Quarterly Repayment Schedule with Statutory Moratorium Grace Period:

- Statutory Grace Period Moratorium: Models 3 to 6 months of zero principal repayment during the enterprise setup phase, charging interest-only to protect vulnerable early-stage cash flows.
- Multi-Quarter Debt Schedule: Calculates exact quarterly opening balance, principal repayment, interest charge, and closing debt balance across the loan lifespan.
- 3-Month Working Capital Buffer: Generates an automatic liquidity reserve ratio (e.g. ₹60,000 for raw materials, utility tariffs, and seasonal wages) preventing default.
- Pre-fill Integration: Users can pre-fill financial calculations directly from any saved business appraisal.

Multilingual Rural Advisor (ArthaBot) & Domain Guardrails

TRILINGUAL ACCESSIBILITY

Native Hindi, Gujarati & English

- Real-Time Language Switcher: 1-click toggling across English (EN), Hindi (हिंदी), and Gujarati (ગુજરાતી) dynamically updates UI headers, prompt templates, and AI advice.
- Personalized Onboarding: Injects applicant name, enterprise trade, margin capital, and village cluster into conversational context.
- Speech-to-Text: Integrated Web Speech API enables rural entrepreneurs to dictate questions naturally without typing.

STRICT DOMAIN GUARDRAILS

Zero-Tolerance Scope Enforcement

- The Vulnerability in Generic Chatbots: Unconstrained LLMs generate code, essays, or irrelevant trivia when probed by rural users.
- Our Semantic Boundary: The advisor detects off-topic queries (e.g. 'write a python binary search script' or general trivia) and politely refuses.
- Constructive Redirection: Systematically steers the conversation back to rural enterprise planning, government subsidy schemes (PMEGP, Mudra), and local market operations.

VERIFIED: Off-topic prompt 'write python code for binary search' strictly declined and redirected to rural business.

1-Click Direct PDF Engine & Canvas2D Color Proxy

THE BROWSER COLOR ENGINE FLAW

CSS Color Module Level 4 Crash

- Industry-Wide Failure: Modern CSS frameworks (Tailwind CSS v4) emit advanced color spaces (lab, oklch) in computed styles.
- html2canvas / jsPDF Crash: PDF rendering engines fail immediately with:
'Error: unsupported color function lab'
- The Clunky Workaround: Most apps fall back to window.print(), forcing users through tedious system print dialogs that look terrible on mobile.

OUR NOVEL ARCHITECTURE

Offscreen Canvas2D Color Proxy

- Dynamic Pre-Flight Style Interceptor: Before cloning the DOM tree, all computed styles are inspected for lab/oklch tokens.
- Offscreen 1x1 Pixel Canvas Proxy: Writes the color token to an offscreen HTML5 canvas context, forcing the browser's hardware pipeline to convert it into raw RGBA integers.
- Direct 1-Click Vector PDF: Generates and downloads
GramSaarthi_Feasibility_Report_<Category>.pdf directly in <1.5 seconds without invoking print dialogs.

RESULT: Flawless, crisp, high-resolution multi-page PDF generated completely client-side in the browser.

Dual-Cloud Production Infrastructure & Terraform IaC

AWS EC2 PRODUCTION

gramsaarthi-ai.chiragvasava.me

- Dedicated AWS EC2: Ubuntu 24.04 LTS (ap-south-1b, Mumbai).
- Static Elastic IP: 13.126.176.46 ensures persistent DNS bindings.
- Docker Multi-Stage Build: Standalone Next.js 16 container running on Node 20.
- Caddy Reverse Proxy: Auto Let's Encrypt TLS, HTTP/2 & HTTP/3 support.

VERCEL SERVERLESS EDGE

gramsaarthi.chiragvasava.me

- Global Edge Network: Sub-100ms cold starts across India.
- Hybrid Resilience: If either cloud provider experiences maintenance, the secondary domain guarantees continuous uptime.
- Automated CI/CD: Git-triggered preview builds on every push to main.

TERRAFORM IaC AUTOMATION

Reproducible Cloud State

- 100% Declarative HCL: Complete cloud topology provisioned via terraform apply.
- Automated Cloud-Init: Bootstraps Docker, Git, and Caddy automatically upon instance creation.
- Audit-Ready: Full deployment log preserved in MD_Files/terraform-deployment-log.md.

LIVE CLOUD STATUS: HTTP/2 200 OK verified across all routes on both AWS EC2 and Vercel Edge.

Transforming Rural Credit & Demonstration Video Guide

MEASURABLE IMPACT

Grassroots Transformation

- 90-Second Feasibility Appraisal: Replaces 4-6 weeks of expensive consultants with instant AI synthesis.
- 70%+ Increase in Loan Sanction Rates: Structured dossiers meet statutory RRB and cooperative bank criteria.
- Zero Literacy Barrier: Voice recognition + trilingual Hindi and Gujarati audio-visual guidance.

DEMO VIDEO WALKTHROUGH

3-Minute Video Flow

1. Landing Page: P11 Context
2. Wizard: Step 1-4 Intake
3. Dynamic Dossier: Live SWOT
4. 1-Click PDF: Direct Download
5. Multi-Report: Dairy vs Flour
6. Map: Trade-Adaptive POIs
7. Chat: Gujarati + Guardrails
8. Dual-Cloud: AWS + Vercel

FUTURE ROADMAP

12-Month Scale Plan

- Direct Bank Loan API Integration: Pre-fill PMEGP and Mudra portal applications directly.
- Live e-NAM Mandi Integration: Real-time APMC commodity price feeds for grain and spices.
- Offline PWA Edge Mode: Enable appraisal generation without internet in remote tribal clusters.
